(54) INFORMATION TERMINAL GENERATING INCOMING CALL TONE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a information terminal generating incoming call tone that can properly transmit an incoming call tone in response to the utilizing state of a user where troublesome setting of the incoming call tone specific to a communication opposite party is avoided.

SOLUTION: This terminal is provided with an input section 4 that can select whether or not an incoming call tone in response to a caller number is to be generated and with a control circuit section 1 that rings a preset incoming call tone when no caller number is in existence, discriminates whether or not an incoming call tone in response to a caller number based on the entry to the input section 4 when the caller number is in existence, rings a preset incoming call tone when non-generation of the incoming call tone in response to the caller number is discriminated or rings an incoming call tone with music scale consisting of at least one tone or over corresponding to each figure of the caller number when discriminating the generation of the incoming call tone in response to the caller number.
